Compliance Advisory
Effective August 26th 2026 REV 32

Environmental Sustainability and Social Responsibility Policies:

RoHS/ Reach Certification

Dear Pleora client:

Pleora conducts business responsibly and in a manner designed to protect the health and safety of our employees, customers, the public and the environment. Pleora demonstrates this responsibility through our actions and commitment to environmental & social legislation. This includes ensuring Pleora and our supply chain supports the following regulatory elements.

This certification does not apply to EMC, EMI or Safety standards that are product based and published under separate releases.

We occasionally distribute information bulletins with important environmental regulatory or standards compliance related information. We also provide generic an all-product environmental compliance statements as follows:

Rev 32:

PFAS reporting New Mexico Pleora is exempt.

The following marking is added here as directed by New Mexico as a user facing document.

Rev 31:

EMRT reports are unavailable from Pleora. By law we provide CMRT only.

Rev 30:

EU Packaging compliance statement:

Regulation (EU) [2025/40](#) of the European Parliament (PWRR) and of the Council of 19 December 2024 on packaging and packaging waste, amending Regulation (EU) 2019/1020 and Directive (EU) 2019/904,

Pleora plastic bubble wrap and bags are:

- (1) (LDPE) with a Nylon Layer-Low Density Polyethylene (resin Identifier code #4) materials and our boxes have a recycling label and a label describing the plastic materials used.
- (2) Cardboard and boxes separation: B flute meeting ASTM D5118.
- (3) Misc bags and bubble wrap are Pouch Polyethylene/Nylon (resin code #7) with a water based acrylic. Meets MIL STD-3010 Method 3005.
- (4) ESD Bags-Not recyclable but these can be re-used providing the user inspects for damage. Material is Amine based, resistivity 10 to the 9th OHMS per Square Area.
- (5) All packaging is PFAS free.

See resin code Symbols below:

Currently ESD bags used are not recyclable due to shielding and metals content.

We are working on a replacement ESD bag in late 2026. ESD bags are resin code 7 multi-layer.

All other packaging is exempt from the ROHS standard and complies with REACH and (All versions of) ROHS with chemicals on the SVHC list below <0.1%

All Pleora packaging is re-usable:

Boxes and plastics contain undefined ratios of post-consumer recycled materials/content and can be reused multiple times at the discretion of the customer. The customer is liable for the re-use of all packaging and or containers, ESD bags and corrugated materials. Any bags reused by a customer: Pleora is not liable for re-use as a damaged box, bag or ESD bag. If an ESD bag is damaged it can cause ESD exposure and or electronics damage when reused.

Pleora maintains and monitors packaging certifications and traceability to our vendors. This information is proprietary and cannot be shared with customers.

Pleora shipments are labelled as Pleora Originating.

By 2030 Pleora will define recycled contents in packaging as per the mandated EU PWRR standard.

EU Cyber Security Compliance: Regulation (EU) 2024/2847 (Cyber Resilience Act).

Pleora is compliant with the EU cyber security act.

Pleora products were independently assessed as compliant, and our products are Class 1.

We practice secure by design principles, and our products are CE compliant.

Pleora does not fill out custom surveys in this regard.

Compliance with Canadian Plastics registry:

Pleora Technologies Inc.
450 March Road, Suite 500
Kanata, Ontario K2K 3K2

+1.613.270.0625
info@pleora.com
pleora.com

Pleora does not import nor ship plastic totalling more than the minimum plastics registry mandates by weight. Thus, we need not declare via the registry.

(PFAS):

Pleora products are confirmed to contain trace elements that contain PFAS at the present time. We continue to work with our OEM sub suppliers who use PFAS in electronics and industry consortia to define what plans are for PFAS removal and or replacement. No timeline is available and content levels are still under calculation and measurement. Therefore, Pleora cannot attest to PFAS PPM total contents at this time.

PFAS is a top priority for Pleora regarding environmental sustainability and supply chain stability. PFAS regulations are evolving. There are numerous regulatory actions proposed at the Province, State, Federal, and international levels that may restrict and/or ban the usage and/or release of PFAS containing substances. Likewise, there are significant supply line stability concerns, associated with litigation. To address the concern, the industry must act with a sense of urgency to reduce and eventually eliminate reliance on PFAS:

Minnesota PFAS exemptions: Pleora is exempt from reporting PFAS:

See our position below on PFAS content.

US EPA TSCA exemptions from PFAS reporting:

- TSCA 8(a)(7)
- The proposed category exemptions are:
- PFAS manufactured (including imported) in mixtures or products at concentrations 0.1% or lower.
- Imported articles.
- Certain byproducts.
- Impurities.
- Research and development chemicals; and
- Non-isolated intermediates.
- The new proposal also offers several other key exemptions:
- It would remove the reporting requirement for imported articles, meaning most finished electronics and components containing trace PFAS would no longer be in scope.
- It also introduces a 0.1% concentration threshold, exempting mixtures and products with very small PFAS content.
- The vast majority of Pleora components and PCBA are manufactured offshore.

Exemptions Minnesota:

J. A semiconductor, including semiconductors incorporated in electronic equipment, and materials. used in the manufacture of semiconductors.

K. non-consumer electronics and non-consumer laboratory equipment not ordinarily used for personal, family, or household purposes

Pleora is asking suppliers to focus on PFAS as follows:

Develop and Share Roadmaps for PFAS Replacement

Accelerate Research & Development of Alternative Technologies

Active engagement in industry consortia:

Semiconductor industry organizations:

SRC1 - The SRC is a partnership between semiconductor companies, academic institutions, and government agencies.

The two major research focus areas in the ESH subprogram are 1) development of new characterization, screen, handling and abatement methods for new materials and processes, and 2) exploration of preferable manufacturing options using green chemistries and sustainable materials - SIA.

Semiconductor PFAS Consortium2 - An international group of semiconductor industry stakeholders collecting the technical data needed to formulate an industry approach to PFAS. Scope includes identifying research needs and drafting plans to address them appropriately and sponsorship of research projects. - PFAS Initiative (SPI)3 , SEMI is involved in multiple efforts including the publication of joint PFAS research priorities between SEMI & ESIA, advocacy including efforts to generate research funds, and WGs within SPI focused on minimizing supply chain concerns through the development of risk maps, replacement roadmaps, and accelerating alternatives to enable supply resiliency.

Current EU SCIP ECHA positions on PFAS challenges and Critical use:

<https://echa.europa.eu/-/echa-and-five-european-countries-issue-progress-update-on-pfas-restriction>.

Similar challenges to a complete BAN TBD at the US EPA level are underway.

Pleora will only monitor EU/SCIP ECHA and US EPA legislation in this regard. US state levels have attempted total bans and have failed to garner country wide acceptance.

PFAS in New designs:

Pleora is attempting to select OEM PFAS free compliant subcomponents wherever available. However, product development timelines may require we select PFAS containing subcomponents as the suppliers may not have PFAS free alternates and or process.

The EU is moving forward with the critical raw materials (CRM) :

EU framework which will require manufacturers to declare CRMs such as neodymium and cobalt in products and facilitate their recycling. Pleora declares that our products may be recycled by the end user through standard WEEE grind and extract methods under the end user's control. Pleora will not recycle scrap products.

Pleora is monitoring the EU Safety Gate Portal:

We cross-check our BOM against recent ROHS and REACH product Violations and none of the affected products are used by Pleora:

Ref- <https://ec.europa.eu/safety-gate-alerts/screen/search?resetSearch=true>

REACH:

The following information has just become available:

The EU Regulation 1907/2006 on Registration, Evaluation, Authorization, and Restriction of Chemicals (REACH), entered into force in June 2007, affects all companies producing, importing, using, or placing products on the European market. The aim of the REACH regulation is to ensure an important level of protection of human health and the environment from chemical substances.

Pleora products are “articles” as defined in Article 33 of the REACH Regulation, it requires companies who supply products which include any article which contains more than 0.1% by weight of any REACH Candidate List Substance to provide their customers with “sufficient information, available to the supplier, to allow safe use of the article including, as a minimum, the name of that substance.”

Pleora is committed to and provides REACH compliant products that meet the regulatory expectations of EU reach directives and requests from our customers. Pleora is compliant with REACH SVHC Annex XIV authorization list dated June 2025. The SVHC list now has 247 candidate entries. Any exemptions on parts noted are documented on the SCIP ECHA dossier portal.

Any SCIP ECHA non-listed products will be fully compliant and Pleora cannot **provide FMD disclosures and we will not provide individual product specific disclosures or certs. Pleora provides product details only through this policy/SCIP ECHA dossiers. Customers are encouraged to create a SCIP ECHA access license, search for Pleora products and pull the dossiers themselves.**

Pleora Definition of Fully Compliant:

No substances exceed the limits placed by REACH or ROHS and some exemptions are present. 7C-1/6C. Fully compliant products will not be posted in SCIP ECHA and only products with allowable exemptions will be posted in SCIP ECHA. Exemptions and sub exemptions are being monitored actively as they change.

Full Material Declarations of Pleora Assemblies (Unavailable):

Pleora reviews compliance by sub assembly BOM item and usually procured parts come from OEM suppliers and or franchised distribution. Pleora assesses yes/no compliance to all required declarable environmental regulations, and the majority of OEM suppliers do not provide (FMD-full material declarations all chemistry) rather they can provide designated substance declarations. It is impossible for Pleora therefore to derive and collate (FMD) at the assembly level:

Pleora Technologies Inc.
450 March Road, Suite 500
Kanata, Ontario K2K 3K2

+1.613.270.0625
info@pleora.com
pleora.com

Additional information (FMD)

There are a few disadvantages to Full Material Disclosure (FMD) reports outlined below:

1. Due to the need to protect supplier Intellectual property many substances remain undisclosed in a full material declaration. (Trade Secret) Many OEM's mandate an NDA between all parties sharing information in FMD format that is costly and prohibitive as well. In the event a previously undisclosed substance becomes restricted or reportable, the supply chain will have to follow the process for updating existing documentation to report the newly reportable substance.
2. Due to supplier limited knowledge, FMD reports often include process chemicals which do not remain in the product. These process materials, if declared, would mislead the downstream suppliers and eventually the customer regarding the correct material composition of the products.
3. Most product bills of materials (BOM) are multi-source, which means that any given component will have more than one supplier. Both the negative declaration used by Pleora, as well as any possible FMD would include the worst-case data (i.e., any reportable or restricted substances would show up in the report). However, the FMD does not give an accurate depiction of all possible declarable substances in the product.

Provision Vehicles /SCIP ECHA:

As per European Union entity ECHA enabled the SCIP dissemination platform on September 14, 2021. The platform provides users, including consumers, recyclers, and other manufacturers, with information about Pleora products containing SVHCs that were submitted into the SCIP ECHA database.

SCIP ECHA has provided a post announcing the dissemination portal and with information about SCIP data that has been published:

<https://echa.europa.eu/-/know-more-about-hazardous-chemicals-in-products-scip-data-published>

The platform is accessible at <https://echa.europa.eu/scip-database>

Note: the Pleora products are listed under the product type," VIDEO INTERFACE." and all Pleora part numbers sold will be posted. Search for the purchased Pleora part number and its SCIP ECHA dossier will appear.

For Pleora clients please direct access the product family SVHC data from our product dossier's in ECHA/SCIP. This data format is not under our control and is updated if required as BOM (Bill of materials) modifications or PCN's are approved and with new product release. **Pleora will not provide links as this portal access requires clients to create their own access.**

RoHS: Pleora provides RoHS (Restriction of Hazardous Substances) compliant and approved exempt products that meet or exceed the expectations of our customers by adhering to environmental regulations established by European Union (EU) RoHS directives.

RoHS 1: Directive 2002/95/EC (RoHS 1) banned the use of six hazardous substances (below) in Electrical and Electronic Equipment (EEE) except where exempted.

- Cadmium(Cd):< 0.01% (100ppm)
- Mercury (Hg):< 0.1% (1000ppm)
- Lead (Pb) :< 0.1% (1000ppm)
- Hexavalent chromium (Cr6+) : <0.1%(1000ppm)
- Polybrominated biphenyls (PBB): <0.1 %;(1000ppm)
- Polybrominated diphenyl ethers (PBDE): <0.1 %(1000ppm)

RoHS 2: Directive 2011/65/EU, known as RoHS-Recast or RoHS 2, was published in 2011 by the EU. It introduced additional requirements for Declarations of Conformity and associated CE Markings of products. The directive also added category 8 (medical devices) and category 9 (monitoring and control instruments), and has additional compliance recordkeeping requirements.

RoHS 3: Directive 2015/863/EU, colloquially known as RoHS 3, was published in 2015 by the EU. This directive added four additional restricted substances (Phthalates) to the Annex II of RoHS 2. The restriction of four Phthalates below will become effective July 2019.

- Bis(2-Ethylhexyl) phthalate (DEHP): < 0.1% (1000ppm)
- Benzyl butyl phthalate (BBP):< 0.1% (1000ppm)
- Dibutyl phthalate (DBP): <0.1% (1000ppm)
- Diisobutyl phthalate (DIBP): <0.1%(1000ppm)

The products include application of exemptions 6(c) [1], 7(a) [2] and 7(c)-I [3].

[1]; 6 (C). Copper alloy containing up to 4% lead by weight

[2]; 7(a). Lead in high melting temperature type solders (i.e., lead-based alloys containing more than 85% by weight or more lead).

[3]; 7(c)-I. Electrical & electronic components containing lead in a glass or ceramic other than dielectric ceramic in capacitors.

Pleora continues to monitor the exemptions listings as they evolve and or are proposed to be split or eliminated. ROHS exemptions have been refreshed in mid-2025, Pleora has valid exemptions for lead only and we await sub exemptions in 12-18 months as defined by the EU.

Pleora is monitoring lead exemptions ROHS: We will update once sub exemptions are released in 12-18 months from this release. Currently Pleora products use 7c1 and 1 product uses 6C which will be eliminated and we will address this shortly as required.

China RoHS:

Pleora products are self-declared as China RoHS compliant and a compliance table provided below: See applicable reference standards and the expected life cycle Table. All Pleora products cannot be individually labeled due to functional restrictions and lack of space. For specific details on exempted materials see RoHS here above.

		China ROHS Compliance				
		有害物质				
组件名称	Hazardous Substances					
Component Name	铅	汞	镉	六价铬	多溴联苯	多溴二苯醚
All Pleora Harware Products	Pb	Hg	Cd	Cr6+	PBB	PBDE
印刷电路板组装						
Printed Circuit Board Assemblies	X	0	0	0	0	0
电缆及电缆组件						
Cables and Cable Assemblies	0	0	0	0	0	0
金属						
Metal Work	0	0	0	0	0	0
本表格是按照 SJ/T 11364 的规定编制。						
This table is prepared in accordance with the provisions of SJ/T 11364.						
O: 表示该有害物质在该部件所有均质材料中的含量均在 GB / T 26572标准规定的限量要求以下						
O: Indicates that said hazardous substance contained in all of the homogeneous materials for this part is below the limit requirement of GB/T 26572.						
X: 表示该有害物质至少在该部件的某一均质材料中的含量超出 GB / T 26572标准规定的限量要求						
X: Indicates that said hazardous substance contained in at least one of the homogeneous materials used for this part is above the limit requirement of GB/T 26572.						
The product contains one hazardous substance (Pb) but is safe to use during the Environmental Protection Use Period (EPUP). This period is indicated by the number of years shown on the logo. When the period expires, the product should be properly disposed of or recycled. The substanc is EU ROHS compliant via exemption 6c 7A 7C						
						

Halogen Free: Low Halogen per JS709C: Pleora compliant.

POP: EU commission Reg 2019/1021 Persistent Organic Pollutants: Pleora compliant.

RISP: Restriction of Substances Packaging (94/62/EC): Pleora compliant.

Conflict Minerals: Latest release is available under [Pleora website policies section](#).

CMRT Reports are provided by Pleora: See Pleora Policies Website

EMRT reports (are not) provided by Pleora:

EMRT is not a legally mandated standard and thus most raw material OEM we use do not provide these and therefore Pleora cannot aggregate an EMRT report.

Pleora has a responsible minerals due diligence sourcing policy compliant with IPC1755 and the OECD due diligence guidance. We are not a member of RMI but work to utilize RMI CMRT report formats and SOR (suppliers or refiners' listings) from a third party. Pleora is committed to sourcing components and materials from companies that share our values regarding respect for human rights, integrity, and environmental responsibility. This includes supporting the Dodd-Frank Wall Street Reform and Consumer Protection Act as it relates to Conflict Minerals (Section 1502), and EU 2017/821 designed to eliminate support of illegal and unethical actions in the Democratic Republic of Congo, and the adjoining countries and other regions other than the DRC great lakes region (i.e. Covered Countries) associated with the mining of 3TG.

Pleora is considered a downstream party in reference to the legislation and simply conducts due diligence compliance. Pleora operates beyond the metal stage and Pleora does not have reporting obligations under the EU and Dodd Frank regulation but use reporting and other tools to make Pleora due diligence more transparent. As such Pleora cannot conduct audits of metal smelters/miners and rely on the RMI NGO and our OEM suppliers to do so.

We believe it is essential to establish validated conflict-free sources of 3TG within the Democratic Republic of the Congo (the "DRC") and adjoining countries and other affected regions globally (together, with the DRC, the "Covered Countries"), so that these minerals can be procured in a way that contributes to economic growth and development in the region. To aid this effort, we have established a conflict minerals policy and an internal team to implement the policy.

Conflict Minerals refer specifically to 3TG minerals and their derivatives:

- Cassiterite : Ore from which Tin (Sn) is extracted.
- Columbine-Tantalite,; Ore from which Tantalum (Ta) is extracted.
- Wolframite : Ore from which Tungsten (W) is extracted.
- Gold (Au): Rare metal found in a native (pure) form and obtained as a byproduct of other mining operations.
- Working 2024 effort to include Cobalt. TBD.

Although Pleora is not listed on the US Securities and Exchange Commission, we are diligently working with our suppliers to ensure our products are manufactured within a socially responsible supply chain and supporting the conflict mineral's objective.

We expect our suppliers to ensure that the 3TG/cobalt in our products are sourced from conformant conflict-free smelters, (SOR) such as those audited through the RMI's RMAP. <http://www.responsiblemineralsinitiative.org>,² the London Bullion Market Association (LBMA) or the Responsible Jewelry Council, each of whom perform due diligence on the source and chain of custody of the 3TG used in our products and provide their due diligence measures to us upon request.

However, Pleora sells products that contain COTS OEM components manufactured for us by other companies and products that include ready-made component parts that we purchase from third parties. Although, many of our hardware products contain conflict minerals, we do not purchase ore and minerals and are therefore unrefined conflict minerals from mines. We are many steps removed in the supply chain from the mining considered a "downstream" purchaser. We purchase materials used in our products from a large network of suppliers: some of those materials contribute necessary conflict minerals to our products.

The origin of minerals cannot be determined with any certainty once the ores are smelted, refined, and converted to ingots, bullion, or other derivatives. The smelters and refiners (referred to as "facilities") are consolidating points for ore and are in the best position in the total supply chain to know the origin of the ores. We rely on our suppliers to assist with our reasonable country of origin inquiry and due diligence efforts, including the identification of smelters and refiners, for the minerals contained in the materials which they supply to us.

If required, we may execute the termination and supplier blacklisting processes that disqualify certain suppliers from doing business with Pleora who refuse or are unable to provide additional conflict minerals data or move away from certain smelters.

US Treasury Sanctions/Expansion of CMRT efforts using 3rd party expert: "Source Intelligence:"

In 2023 our CMRT campaign expanded to use the services of, "Source Intelligence." to issue and collect CMRT due diligence reports from our supply chain. This effort will continue annually as we improve our CMRT reporting and due diligence.

Pleora was advised of US SEC 2022 sanctions and is hereby communicating to our OEM suppliers in our 2024 CMRT campaign to review and ensure compliance to US treasury/EU sanctions against African Gold Refiners and Goetz companies. (and several others). We encourage OEM suppliers and their sub tiers to assess their CMRT compliance and remove these implicated suppliers from the Treasury and other global sanctions. Pleora has no control over OEM compliance with these sanctions we are informing and encouraging compliance annually thus conducting due diligence.

<https://home.treasury.gov/news/press-releases/jy0664>

Pleora CMRT reports are available under our website ENV policies section. Version 6.5 June 2026 is available. See Pleora website policies section

Lastly, we have seen an increase in high-risk smelters: 2023 Campaign Awareness:

Compared to prior years due to government sanction-related activity or other criteria, which has resulted in more smelters deemed nonconformant. We continue to be guided by input and guidance from industry leading sources and we continue to develop our response and remediation measures to remediate the high-risk smelters in our supply chain over time. Since the smelter data in our CMRT and this Report reflect data collected from our suppliers in the past year, we expect that our Company Level CMRTs may continue to include high-risk smelters relating to sanction-related activity until we can successfully work with our supply base to either remediate or remove sanctioned smelters from their supply chain.

Current CMRT REV is 6.4.

We have contracted and are communicating through a third-party provider to all OEM suppliers the observed presence of these RMI and US Treasury implicated smelters/refiners of concern and requesting updates with 6.4 RMI CMRT report present on Pleora website. We have planned to refresh to 6.5 by fall 2026.

Suspected SOR and declared in our CMRT Reports:

African Gold Refinery, Fidelity Printers and Refiners Ltd., Industrial Refining Company, Kaloti Precious Metals, and Sudan Gold Refinery.

US EPA Toxic Substances Control Act:TSCA

To the best of our knowledge Pleora products are complaint /free from these substances so listed in the US EPA . Section 6(h) TSCA.

DecaBDE (CASNo: 1163-19-5)

PIP (3:1) (CASNo: 68937-41-7)

2,4,6-TTBP (CASNo: 732-26-3)

PCTP (CASNo: 133-49-3)

HCBD (CASNo: 87-68-3)

Pleora continues to monitor these evolving legislations for impact:

Canada Proposed Prohibition of Toxic Substances:

<https://gazette.gc.ca/rp-pr/p1/2022/2022-05-14/html/reg2-eng.html>

EU Adding Formaldehyde to REACH Annex XVII

Not applicable to articles for outdoor, industrial or professional use.****

EU Proposed Amendment to Perfluorotanoic Acid (PFOA) in POPS:

EU regulation 2019/1021 and amendment 2020/784 on persistent organic pollutants POPS to the best of our knowledge Pleora products are free from POPS.

BPA Free: yes

EU Opinion Published May 18th 2022 restriction of PFHxA:

Known applications in EEE industry are exempt for many years. No impact.

Basel /Rotterdam Stockholm Conventions:

<http://www.brsmeas.org/MediaHub/News/PressReleases/COPs2022closurepressrelease/tabid/9214/language/en-US/Default.aspx>

USA Uflpa entity List Compliance:

This list monitored by Pleora through access to the <https://www.dhs.gov/uflpa-entity-list>. We do not use any entity listed here in our production, supplier base, or services.

Disclaimer ROHS , Reach, Conflict Minerals, PFAS, TSCA and Canada Toxic Substances.:

All product information relating to environmental compliance, including, but not limited to REACH and RoHS, and conflict minerals and TSCA listed above is provided to Pleora by the product OEM component manufacturers and our raw material suppliers and is provided by Pleora via compliance certifications at the product level on an "AS IS" basis. Pleora makes no representation as to the accuracy or completeness of the information. Pleora DISCLAIMS ALL REPRESENTATIONS, WARRANTIES AND LIABILITIES UNDER ANY THEORY WITH RESPECT TO THE PRODUCT INFORMATION PROVIDED.

All product compliance statement information is subject to change without notice. Pleora is not responsible for typographical or other errors or omissions in component/product information.

Pleora has assessed compliance to REACH, ROHS, Conflict Minerals, Canada Toxic Substances and TSCA listed above and to the best of our knowledge indicate compliance/or exemptions (SEE SCIP ECHA Dossiers) based on available data provided by our OEM suppliers or industry consortia reporting data bases.

The release of the supporting assessment component detail beyond our statement of conformity at the product level to the above noted standards shall not be provided. Pleora does utilize the ECHA SCIP database to declare products that contain an SVHC with an available exemption. Please feel free to inquire through SCIP ECHA access.

Pleora products do not contain the Substances of Very High Concern as published by REACH SCIP/ECHA with exemption of lead. ** Lead which was added to the SVHC list may be contained in some products where the RoHS exemption 6C-7a (lead in high melting temperature type die attach solder) or 7c-1 lead Oxide in ceramic. Maximum limits for exempted ROHS directive recast does not apply.

Unique ROHS compliance to Saudi Arabia:

Pleora will not conduct independent lab testing for ROHS compliance as directed from this country standard. We state self-declared or vendor declared ROHS and other compliance only.

Recent PFAS Declarations for state of Maine/Others:

Pleora has engaged with a third party in 2024 to assess PFAS risks/content and create a mitigation plan through the end of 2025. Pleora is committed to sustainability and Environmental stewardship. We are presently assessing through 2024/5 campaigns on PFAS if our raw materials and component OEM have the reporting in place as mandated by the US State of Maine/(Others) and we will be unable to declare reporting into the Maine system as most commercial OEM component suppliers we use have not yet assessed PFAS content. This legislation is rapidly evolving, and many regions simply cannot report yet. Pleora has a policy to address, identify PFAS content and will formulate a plan as our lower tier supply chain is impacted.

Canada Plastics Registry /PFAS registry January 2025:

Not applicable.

What Are PFAS:

Referred to as, "Forever Chemicals." that have persistent Bioaccumulations.

California Proposition 65:

Pleora products are sub-assemblies that are not commercially or retail sold and are not accessible to consumers as all parts are self-contained inside a customer system upon installation. As consumers are not exposed to substances of concern in proposition 65

Prop 65 requires "clear and reasonable" warnings to be given if, while doing business, a person knowingly and intentionally exposes an individual in California to a chemical on the Prop 65 List. Prop 65 also prohibits knowingly discharging or releasing a chemical on the Prop 65 List such that it is likely to, or will, enter any California drinking water source.

Pleora products and evaluation kits are not intended to expose any person to any chemical on the Prop 65 List during normal product use. Accordingly, the Prop 65 "clear and reasonable" warnings requirements do not apply to Pleora semiconductor Products, boards, and evaluation kits.

As a result, Pleora semiconductor products, boards, and evaluation kits do not include warnings specifically related to Prop 65 or the Prop 65 List chemicals and Pleora does not make available a specific list of Prop 65 List chemicals that may be contained in our semiconductor products, boards, and evaluation kits

Pleora Technologies conducts its worldwide operations in a socially responsible, ethical, and sustainable manner to protect the environment, and ensure the safety and health of our employees, customers, visitors, and surrounding communities. To accomplish this policy, we hereby establish the following objectives to be adopted as standard policies by all our worldwide operations.

Safety and Health of our Employees:

Provide a safe and healthy working environment for our employees and contractors working at our sites. Both in Canada and abroad following applicable state and local laws. Integrate safety, health, and environmental protection into our business activities. Reduce risk in workplace to a level defined as acceptable, considering the legal requirements and Pleora policy.

Plan, implement and control effectively the processes necessary to meet the health and safety requirements and eliminate health hazards by using acceptable hierarchy of risk controls. Educate and train employees and contractors to conduct their daily activities in an environmentally responsible and safe manner. Pleora is committed to the prevention of injury and ill health and continual improvement in safety and health management performance. Fix and achieve targets regularly by implementing programs to improve health and safety of the employees and optimize the environmental performance.

Protection of the Environment:

Conduct our business operations in a manner that protects the environmental quality of the communities in which our facilities are located. Reduce risks involved with storage and use of hazardous materials. Pleora establishes and maintains management systems by a PFMEA systematic verification process to ensure continuous improvement of the environmental performance. Identify and mitigate all risks to environment, people and property. Maintain emergency Disaster Recovery and preparedness plans at all manufacturing facilities.

Compliance with Environmental Health and Safety (EHS) Laws and Regulations:

Meet or exceed the requirements of all relevant environmental, health and safety laws and regulations in every location. Maintain a system that provides timely updates of regulatory change. Develop a product stewardship program that ensures that changes in EHS requirements are reflected in our products and processes. Cooperate fully with government agencies in meeting applicable requirements.

Energy, Resource Conservation and Pollution Control:

Pleora has no formal GHG reduction targets currently.

Pleora strives to minimize consumption of energy and materials, and the emissions of greenhouse gases and carbon for sustainable use in the design of products and processes. Promote the recycling of materials, including hazardous waste, whenever possible. Minimize the generation of hazardous and non-hazardous waste at our facilities to prevent or eliminate pollution. Manage and dispose of waste safely and responsibly. Comply with Ontario OSHA, WHIMIS and Environmental legislation. As required complete facility provincial MOE (Ministry of Environment) C of A applications and regulatory approval when required. All packaging materials are recycled at Pleora, all scrap electronics are safely destructed, ground up and meals extracted by a third party destructor facility with certificates of destruction on file.

Supported and flowed down by Pleora to our supply chain via QC clauses:

Integrity Declaration on Doing Business with Xinjiang Entities forced labor issues:

Effective July 1st, 2020, Canada's *Customs Tariff Act* and the Schedule to the Customs Tariff were amended to include a **prohibition on the importation of goods produced wholly or in part by forced labor**. The Government of Canada expects companies to take every step possible to ensure that their supply chains conform to Canadian law with respect to the prohibition on the import of forced labor. The Government of Canada also expects Canadian companies active abroad to respect human rights, operate lawfully, and conduct their activities in a responsible manner consistent with international standards such as the [*UN Guiding Principles for Business and Human Rights*](#) and the [*OECD Guidelines for Multinational Enterprises*](#).

Given known risks with respect to forced labor, Canadian companies active not only in China but also around the world should be particularly vigilant to ensure that they operate in accordance with Canadian law, and conform with OECD and UN standards. The Government of Canada is deeply concerned by reports and documentary evidence of the repression of Uyghurs and other ethnic minorities by Chinese authorities in the Xinjiang Uyghur Autonomous Region (XUAR). Evidence suggests that forced labor of Uyghurs and other ethnic minorities is taking place across China and tainting global supply chains in a variety of industries. For more information about the human rights situation in Xinjiang and the risks of doing business with Xinjiang-related entities, please click [Global Affairs Canada advisory on doing business with Xinjiang-related entities](#).

[*UN Guiding Principles for Business and Human Rights*](#) and "I. THE CORPORATE RESPONSIBILITY TO RESPECT HUMAN RIGHTS 13 A. Foundational principles 13 B. Operational principles 16";

Communications:

Promote sound environmental, health and safety principles and practices by encouraging open communication with employees, governmental agencies, suppliers, contractors, customers, and industry groups. Obligate to involve and consult employees or their representatives in decision making within the scope of management systems, in the evaluation of health and safety risks and determination of protective actions by regular consultations.
